A COLOURFUL STORY

Stoopen & Meeûs was founded in 1894 by two friends, Edmond Stoopen and Paul Meeûs, who travelled the world in search of the most vibrant and beautiful pigments.

More than a century later, their passion for colour lives on. And today, Stoopen & Meeûs produces and exports quality pigments, dyes, mineral paints and custom-blended pigments to over 80 countries worldwide.

With this book, we invite you to share our passion and explore our world of colours.

By delving into its stories, and delighting in its striking, vivid images, you share in a love affair with colour that is as old as history itself.

We are Stoopen & Meeûs, your partner in colour for the next 100 years.

PIGMENTS & MINERAL FINISHES

PIGMENTS

A pigment is a coloured powder that colours a carrier such as concrete, plaster, plastic, paint, etc. The finer the pigment is distributed in the carrier, the stronger the colour effect.

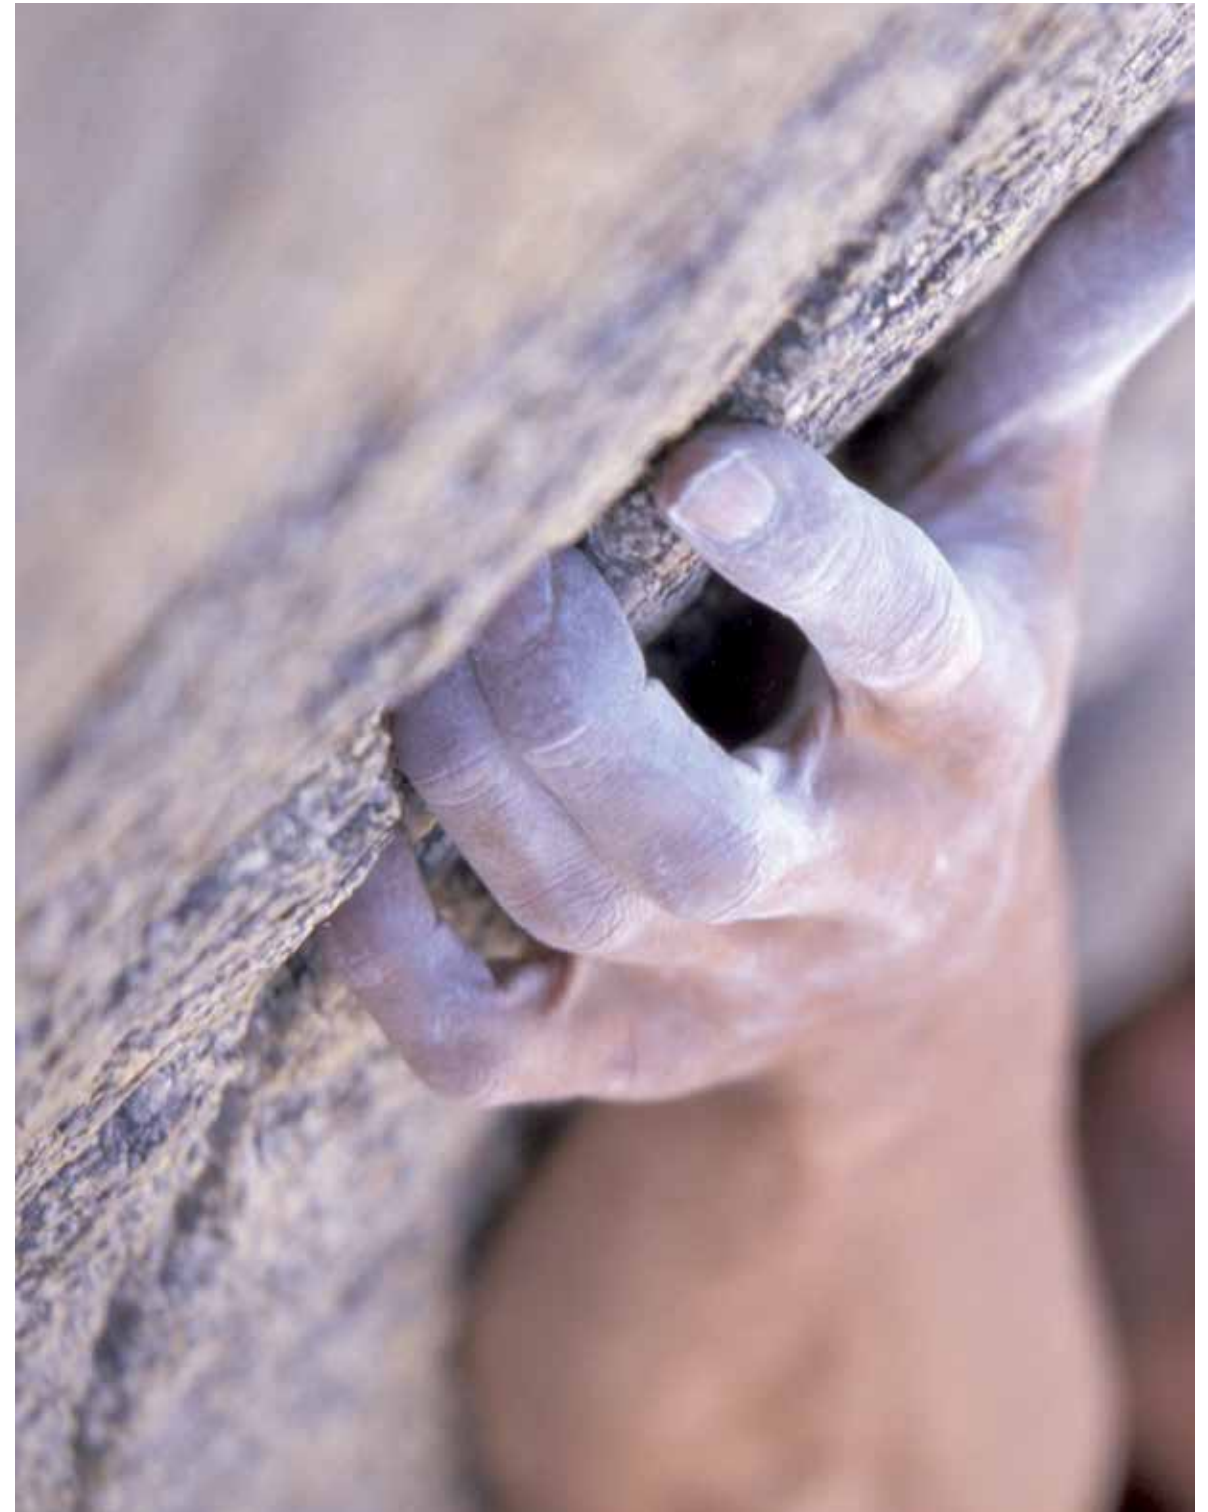

PIGMENTS & MINERAL FINISHES

MINERAL FINISHES

A mineral is a naturally occurring substance which is the product of geological processes.

Minerals come from the earth. The raw ingredients used for Stoopen & Meeûs paints are sand, clay, chalk and lime which are mined from rocks or excavated from deposits across Europe. All of these natural sources are self-replenishing which is why these raw materials are so sustainable.

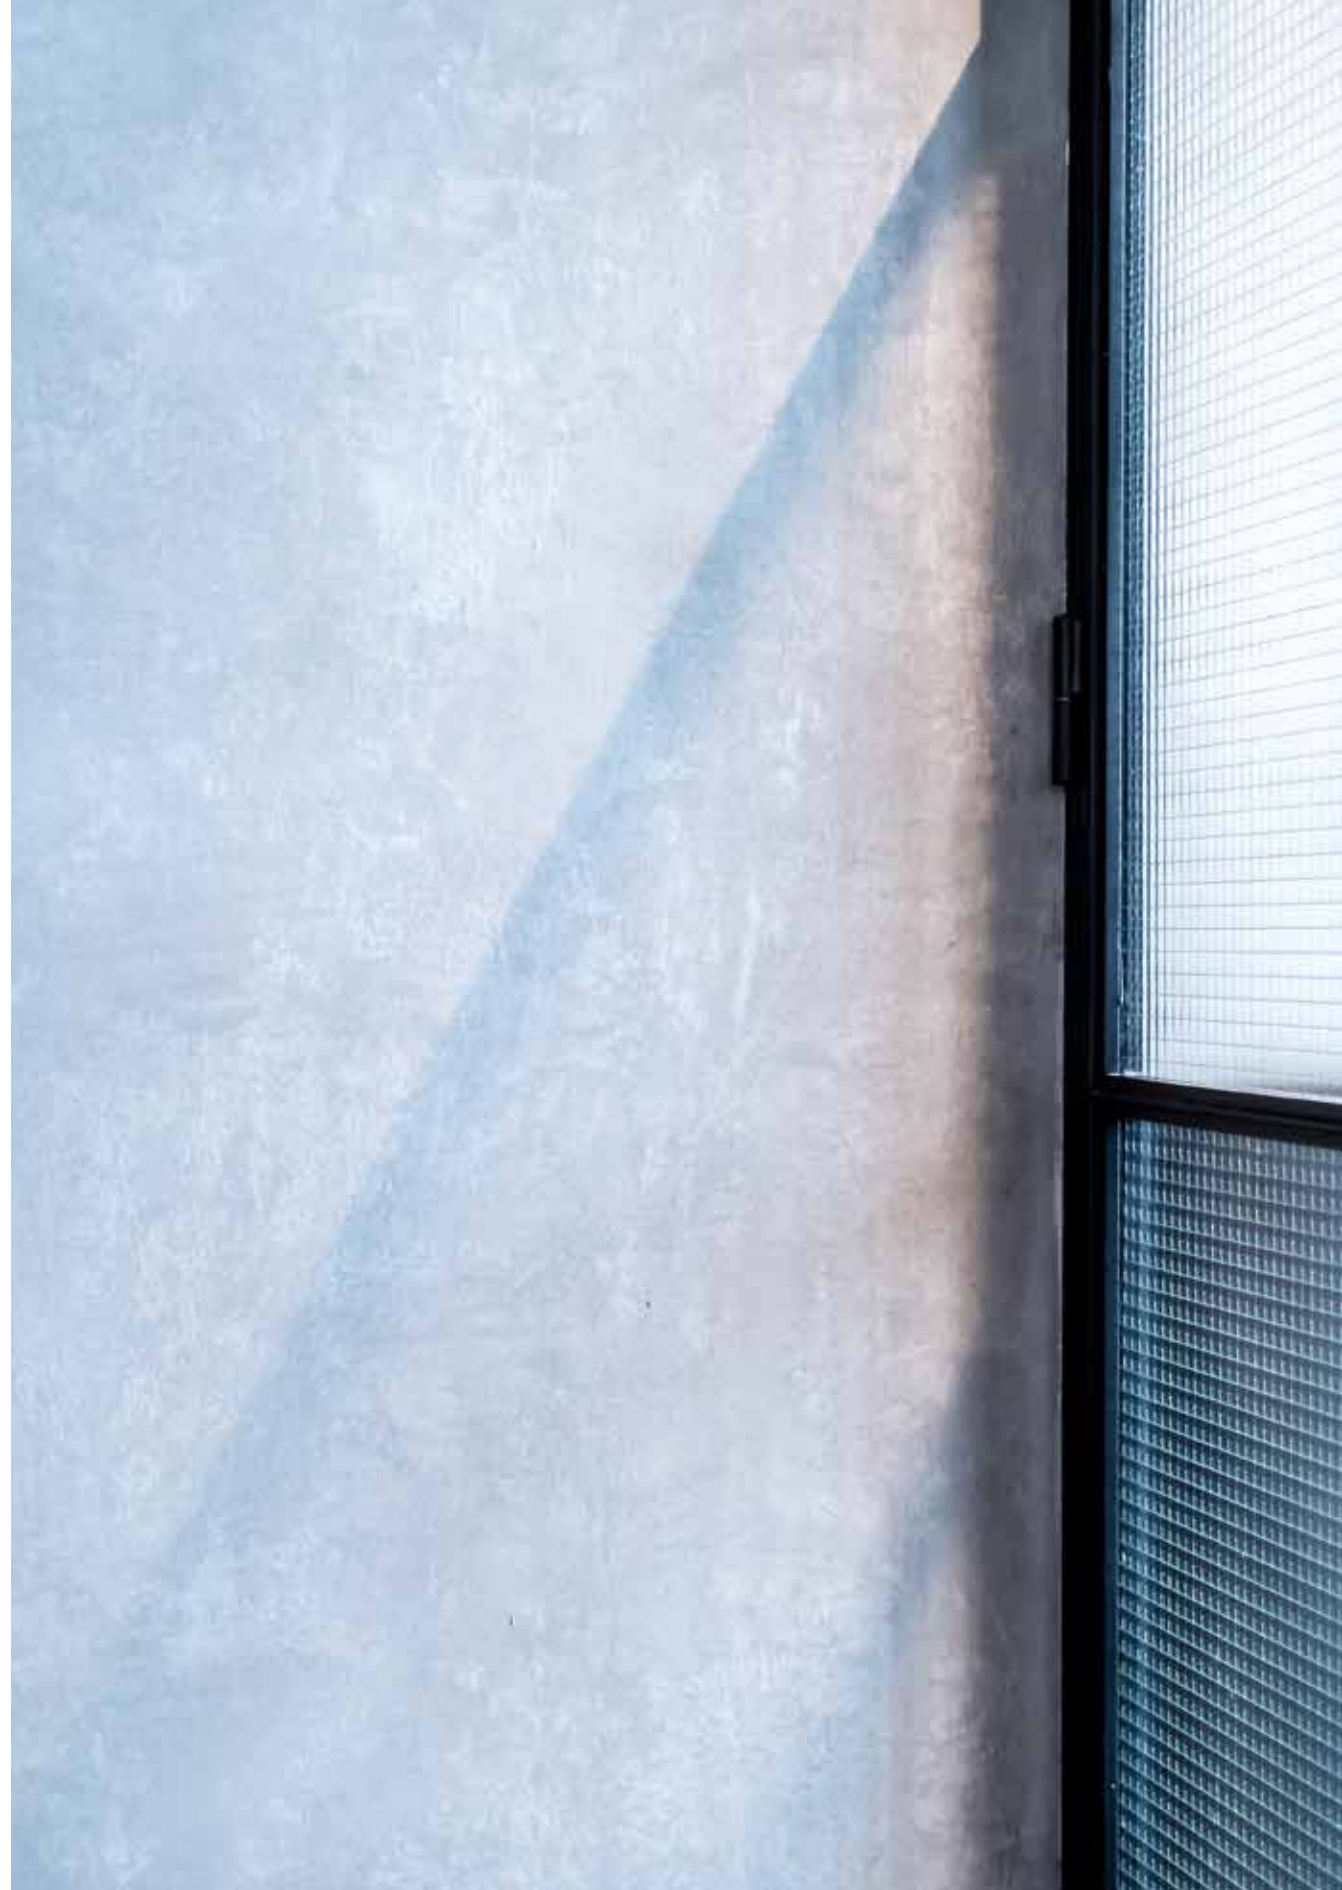

STUC

A high-quality, decorative, sustainable and environment friendly finishing product, for floors and walls, also for bathrooms and kitchens.
